

TYPE FAMILIES

In the sixteenth century, printers began organizing roman and italic typefaces into matched families. The concept was formalized in the early twentieth century.

ANATOMY OF A TYPE FAMILY

ADOBE GARAMOND PRO, designed by Robert Slimbach, 1988

The roman form is the core or spine from which a family of typefaces derives.

ADOBE GARAMOND PRO REGULAR

The roman form, also called plain or regular, is the standard, upright version of a typeface. It is typically conceived as the parent of a larger family.

Italic letters, which are based on cursive writing, have forms distinct from roman.

ADOBE GARAMOND PRO ITALIC

The italic form is used to create emphasis. Especially among serif faces, it often employs shapes and strokes distinct from its roman counterpart. Note the differences between the roman and italic a.

SMALL CAPS HAVE A HEIGHT THAT IS SIMILAR TO the lowercase x-height.

ADOBE GARAMOND PRO REGULAR (ALL SMALL CAPS)

Small caps (capitals) are designed to integrate with a line of text, where full-size capitals would stand out awkwardly. Small capitals are slightly taller than the x-height of lowercase letters.

Bold (and semibold) typefaces are used for emphasis within a hierarchy.

ADOBE GARAMOND PRO BOLD AND SEMIBOLD

Bold versions of traditional text fonts were added in the twentieth century to meet the need for emphatic forms. Sans-serif families often include a broad range of weights (thin, bold, black, etc.).

Bold (and semibold) typefaces each need to include an italic version, too.

ADOBE GARAMOND PRO BOLD AND SEMIBOLD ITALIC

The typeface designer tries to make the two bold versions feel similar in comparison to the roman, without making the overall form too heavy. The counters need to stay clear and open at small sizes. Many designers prefer not to use bold and semi-bold versions of traditional typefaces such as Garamond, because these weights are alien to the historic families.

Italics are not *slanted* letters.

TRUE
ITALIC

TYPE CRIME:
PSEUDO ITALICS
The wide, ungainly forms of these mechanically skewed letters look forced and unnatural.

Some italics aren't slanted at all.
In the type family Quadraat, the italic form is upright.

QUADRAAT, designed by Fred Smeijers, 1992.
