

II.520: A Workshop on Geographic Information Systems

II.188: Urban Planning and Social Science Laboratory

## Making Sense of the Census

September 29, 2010

# Census Discussion Overview

## Utilizing Large Tabular Datasets (US Census)

---

- ▶ Understand key aspects of US Census Data
  - ▶ What is it and why do we care?
  - ▶ How are the data collected?
  - ▶ What data are available?
  - ▶ Introduction to Census geography and summary levels
  - ▶ A quick look at the Census documentation
  - ▶ A quick look at some sample data
- ▶ Understand nature and use of large, highly structured, public datasets
  - ▶ Examine primary US Census Data (SF3=Summary File 3) at the block group level
  - ▶ Appreciate differences between Census SF3 CDs and third-party census extracts
  - ▶ Learn how to manipulate census data in MS-Access and ArcGIS

# Example - Thematic map of Income (viz., median earnings)

## ▶ Isn't this easy?

We did thematic map of income on day 1!

- ▶ Yes, if desired variable is already in attribute table of map
- ▶ There are thousands of variable in the 'long form' census
  - ▶ Which combinations zero in on **useful indicator**
  - ▶ Drilling down and combining data are often needed
- ▶ What do we mean by 'income'
  - ▶ Household, personal??
  - ▶ Earned income, all income??
  - ▶ At what scale? state, county, city, tract, block group??
- ▶ For what time period? weekly, yearly, part-time??

# Example - Thematic map of Income

## (viz., median earnings)

---

- ▶ Example: median 1999 personal earnings from the 2000 US Census
  - ▶ **Variable P85 (among the hundreds of census variables and thousands of columns)**
  - ▶ P85 records "Median earnings in 1999 dollars by sex for the population 16 years and over with earnings"
    - ▶ 'earnings' includes wages, salaries, and net self-employment income (but not entitlements)
  - ▶ The P85 table has three columns:
    - ▶ P085001 = total (for **universe** of population 16+ years old with earnings)
    - ▶ P085002 = male
    - ▶ P085003 = female

# Example - Thematic map of Income (viz., median earnings)

---

- ▶ Use MS-Access database in class locker:  
M:\data\census2k\hw2\_sf3\_lite.mdb
  - ▶ Two of the 70+ raw US census files (for Massachusetts) have already been loaded
  - ▶ Determine the median earnings for Cambridge block groups
    - ▶ Understand census data structure and use of raw data
    - ▶ Examine ER diagram of relationships among the tables used in this query
    - ▶ Illustrate SQL query development in MS-Access
- ▶ Save query and 'make table' to have results available in both forms

# Example - Thematic map of Income

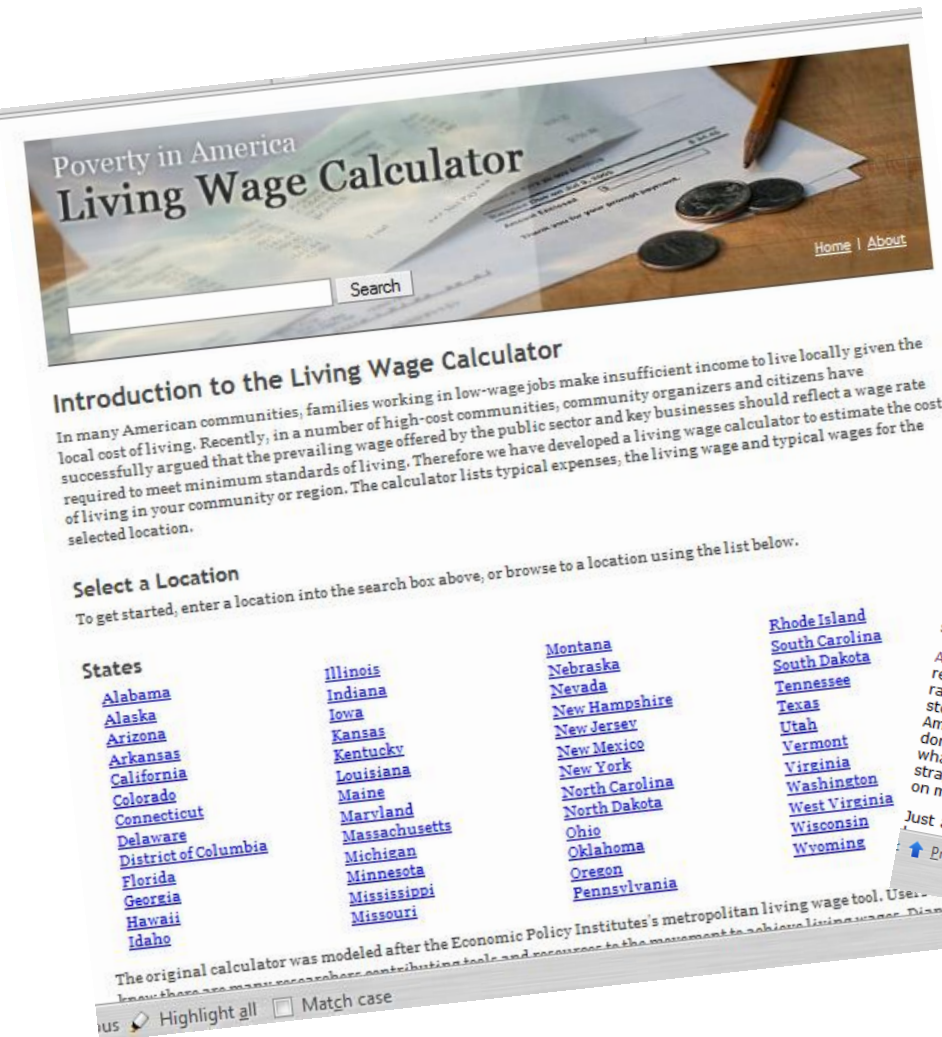

(viz., median earnings)

---

- ▶ Map median earnings for Cambridge block groups
  - ▶ Bring MS-Access query results into ArcMap
  - ▶ Create thematic map
- ▶ Examine Technical Documentation for the SF3 Census data
  - ▶ Online site at US Census:  
<http://www.census.gov/prod/cen2000/doc/sf3.pdf>
  - ▶ Copy in class locker (for faster access):  
<http://mit.edu/11.520/data/census2k/sf3.pdf>
- ▶ Learn how to identify variables of interest and find them in the data tables

# Examples: Research Projects based on Census

**Poverty in America Living Wage Calculator**

Introduction to the Living Wage Calculator

In many American communities, families working in low-wage jobs make insufficient income to live locally given the local cost of living. Recently, in a number of high-cost communities, community organizers and citizens have successfully argued that the prevailing wage offered by the public sector and key businesses should reflect a wage rate required to meet minimum standards of living. Therefore we have developed a living wage calculator to estimate the cost of living in your community or region. The calculator lists typical expenses, the living wage and typical wages for the selected location.

**Select a Location**

To get started, enter a location into the search box above, or browse to a location using the list below.

**States**

- Alabama
- Alaska
- Arizona
- Arkansas
- California
- Colorado
- Connecticut
- Delaware
- District of Columbia
- Florida
- Georgia
- Hawaii
- Idaho
- Illinois
- Indiana
- Iowa
- Kansas
- Kentucky
- Louisiana
- Maine
- Maryland
- Massachusetts
- Michigan
- Minnesota
- Mississippi
- Missouri
- Montana
- Nebraska
- Nevada
- New Hampshire
- New Jersey
- New Mexico
- New York
- North Carolina
- North Dakota
- Ohio
- Oklahoma
- Oregon
- Pennsylvania
- Rhode Island
- South Carolina
- South Dakota
- Tennessee
- Texas
- Utah
- Vermont
- Virginia
- Washington
- West Virginia
- Wisconsin
- Wyoming

The original calculator was modeled after the Economic Policy Institute's metropolitan living wage tool. Use it here to see how many researchers are contributing tools and resources to the movement to achieve living wages. [Living Wage Calculator](#)

**POVERTY in America** One Nation, Pulling Apart

Introduction to the Poverty in America Project

The United States is a nation pulling apart to a degree unknown in the last 25 years. Despite more than a decade of strong national economic growth, many of America's communities are falling far behind median national measures of economic health. [More...](#)

**How to Use This Site**

The title bar at the top of the page provides basic navigation to the primary portions of this site. Recent news items related to poverty in America are listed below on the left, with the most recent entries at the top. Archives of older news items are also available. Quick links to the most popular projects and tools are listed below on the right.

October 15th, 2006 by Dr. Amy K. Glasmeier

**Americans Lack Spare Cash, Bringing Hardship to Places like Scioto County Ohio**

September 13th, 2006 by Dr. Amy K. Glasmeier

ACNielsen, the world's leading marketing information company, reports that Americans once again rank near the top of global ratings when it comes to being strapped for cash (see the story below). The rating company can't exactly figure out why Americans are so strapped for cash, but note that Americans don't like to over spend and actually try to follow budgets. So what is the problem then? The answer is simple: Americans are strapped for cash because of the difficulty of making ends meet on minimum wage jobs.

Just ask the Barringer Family of Scioto County Ohio why they

# What Is the Census

- ▶ Mandated by the **Constitution of the United States**
- ▶ **Census History**
  - ▶ The **first census** took place in **1790** to determine the number of seats each state would have in the U.S. House of Representatives.
  - ▶ The census was created to gain a better understanding of **where people lived** and to **establish patterns of settlement** as the nation grew.
  - ▶ The **modern census of population and housing** was established in **1940** with the incorporation of the housing component and the introduction of sampling techniques for the **long form**
- ▶ **Census Bureau**
  - ▶ The Census Bureau was established in 1902.
  - ▶ Today, in addition to administering the census of population and housing, the Census Bureau conducts more than 200 annual surveys, including the **American Community Survey**, the **Current Population Survey** and **economic censuses** every five years.

# Why Do We Care?

---

- ▶ **U.S. Congressional representatives are apportioned based on census counts.**
- ▶ **Federal dollars are distributed based on census**
  - ▶ for schools, employment services, highway assistance, housing construction, hospital services, programs for the elderly, etc.
- ▶ **Conducted every 10 years (now → a rolling census)**
- ▶ **An actual count of entire population** categorized by various criteria
- ▶ **The only source for spatially detailed demographic data**
  - ▶ with a consistent coast-to-coast data structure
- ▶ **The most reliable, detailed, and consistent source**
  - ▶ for describing local areas: neighborhoods, cities, counties
  - ▶ of time series demographic data available

[illegible]

- ▶ 10

# What's Included:

---

- ▶ **Information on Population, Employment & Housing Characteristics**
- ▶ **Long Form: Sample Counts (STF 3/SF 3)**

## **Population Characteristics**

Social Characteristics

*Education*

*Citizenship*

*Ancestry*

*Language*

*Disability*

*Children*

*Place of Birth*

Economic Characteristics

*Income*

*Labor Force Status*

*Employment*

*Place of Work*

*Public Assistance*

## **Housing Characteristics**

*Age of Housing*

*Heating Fuel*

*Facilities*

*Vehicles*

*Mortgage Status*

---

▶ *Retirement Income*

# What's Included:

---

- ▶ **Information on Population, Employment & Housing Characteristics**
- ▶ **Short Form: 100% Count (STF 1/SF 1)**

## **Population Characteristics**

*Age*

*Gender*

*Race*

*Hispanic Origin*

*Marital Status*

*Household Type*

*Household Relationship*

## **Housing Characteristics**

*Tenure*

*Value or Contract Rent*

*Vacancy Status*

*Number of Rooms*

*Units in Structure*

*Congregate Housing*

- ▶ **Why We Need to Know the Two Components**
  - ▶ Accuracy of the data varies and counts differ (Why?)
  - ▶ It helps us to understand how the data are organized in Summary Files (SFs)

# Census Geography and Summary Levels

- ▶ The Census organizes and aggregates data into a series of geographic hierarchies
- ▶ Standard Hierarchy of Census Geographic Entities (from *Census 2000 Summary File 1 Technical Documentation*, prepared by the U.S. Census Bureau, 2001, p.A-25)

# Census Geography and Summary Levels

- ▶ If no line joins 2 geographic types, then an absolute and predictable relationship does not exist between them.
- ▶ For example, many places are confined to one county. However, some places extend over more than one county, such as New York City. Therefore, an absolute hierarchical relationship does not exist between *counties* and *places*, and any tabulation involving both these geographic types may represent only a part of one county or one place.

- ▶ With connecting lines, the diagram also shows the hierarchical relationships between geographic types.

# Census Geography and Summary Levels

## ► State-County-PLACE-Tract-Block Group Nesting

### Summary Level Geographic Unit

010	United States
020	Region: Northeast (NE), Midwest (MW), South (S) and West (W) Regions
030	Division: Northeast Region: New England, Mid Atlantic Midwest Region: East North Central, West North Central South Region: South Atlantic, East South Central, West South Central West Region: Mountain, Pacific
040	State (includes Washington, D.C. & Puerto Rico)
050	County
060	<b>County Subdivision</b>
070	<b>Place</b>
080	Census Tract / Block Numbering Area (average 4,000 persons)
090	Block Group (average 1,000 persons)
100	Block (average 85 persons)

# Census Geography and Summary Levels

## State-County-Tract-Block Group Nesting

Summary Level	Geographic Unit
040	State (includes Washington, D.C. & Puerto Rico)
050	County
140	Census Tract
150	Block Group

## Supplemental Geographic Areas

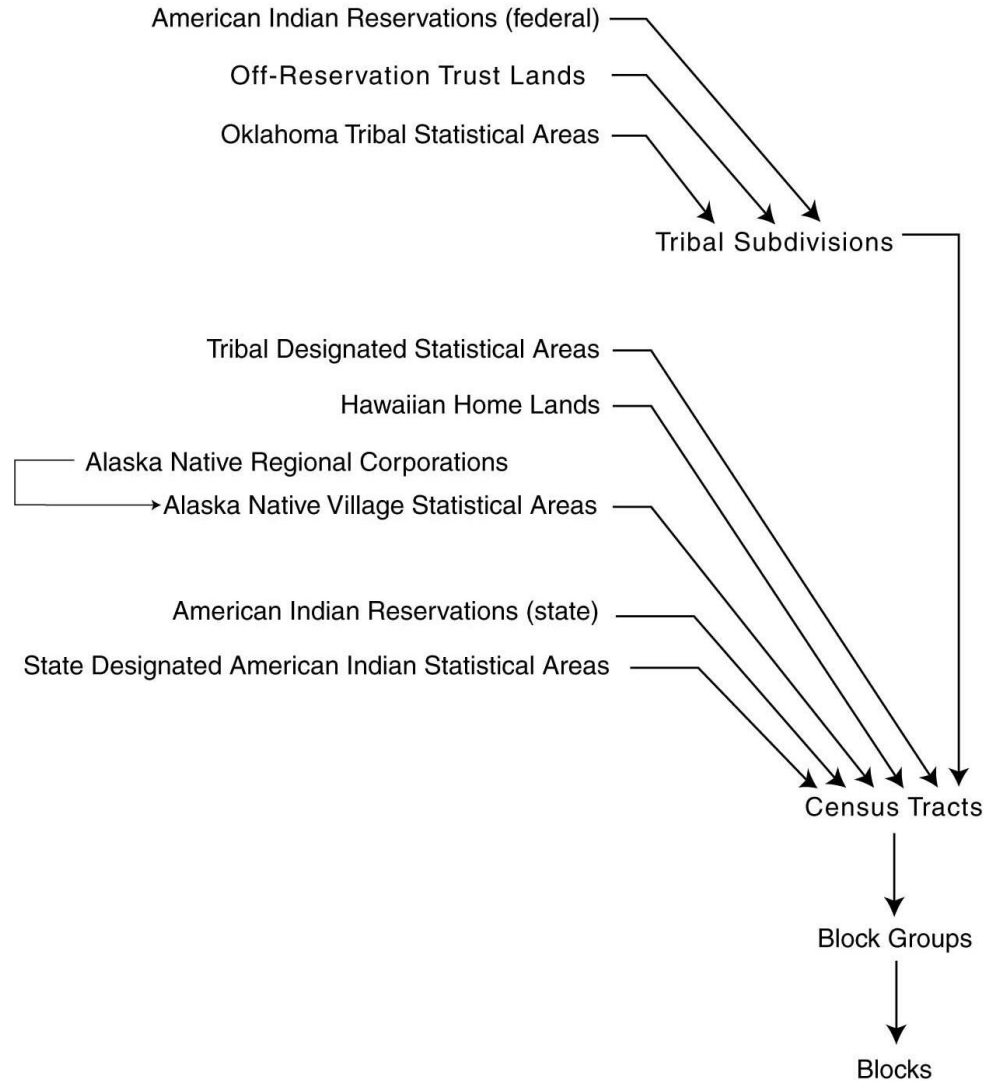

Summary Level	Geographic Unit
400	Urbanized Areas
300	Metropolitan Areas (MSAs, CMSAs)
200	American Indian and Alaska Native areas
800	ZIP codes

# Census Geography and Summary Levels

- ▶ Hierarchy of American Indian, Alaska Native, and Native Hawaiian Entities (from *Census 2000 Summary File 1 Technical Documentation*, prepared by the U.S. Census Bureau, 2001, p.A-26)

# A Visual Look at Census Geography

- ▶ Continental United States (Regions in blue; Divisions in green; States in brown)

## Figure A-3. **Census Regions, Census Divisions, and Their Constituent States**

(Source: the U.S. Census Bureau, 2001, p. A-27)

### **Northeast Region**

*New England Division:*

Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut

*Middle Atlantic Division:*

New York, New Jersey, Pennsylvania

### **Midwest Region**

*East North Central Division:*

Ohio, Indiana, Illinois, Michigan, Wisconsin

*West North Central Division:*

Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas

### **South Region**

*South Atlantic Division:*

Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida

*East South Central Division:*

Kentucky, Tennessee, Alabama, Mississippi

*West South Central Division:*

Arkansas, Louisiana, Oklahoma, Texas

### **West Region**

*Mountain Division:*

Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada

*Pacific Division:*

Washington, Oregon, California, Alaska, Hawaii

-----

# A Visual Look at Census Geography

---

## ► Counties

# A Visual Look at Census Geography

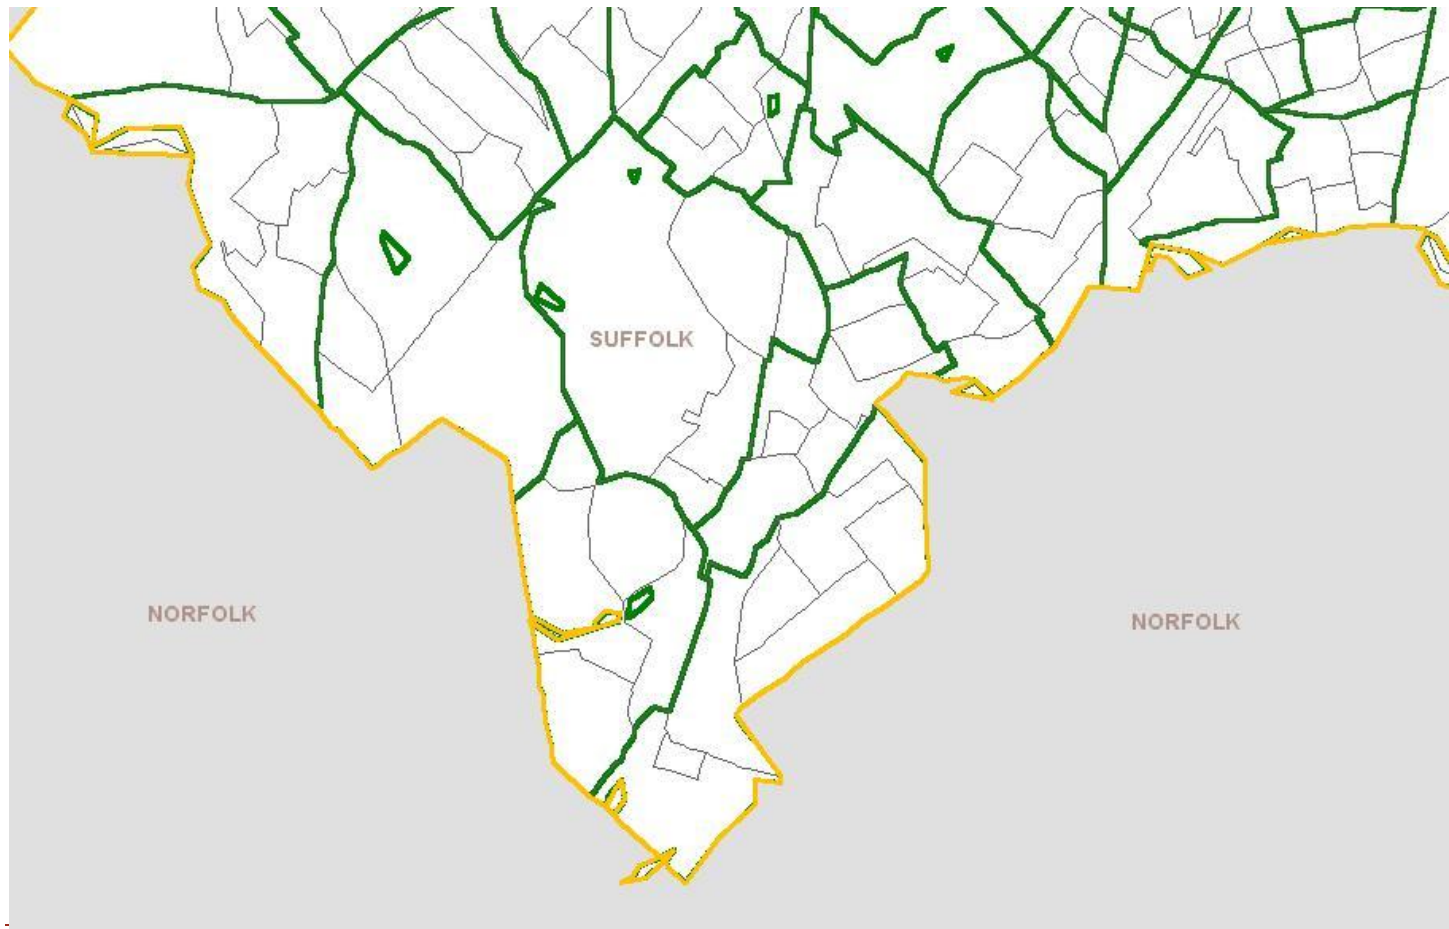

## ► A Closer Look at Southern New England Counties

# A Visual Look at Census Geography

- ▶ **Tracts (green lines) and Block Groups (gray lines) in Suffolk County, MA**

# Census Geography Concepts

---

- ▶ The **Census Block** is the basic level
- ▶ **Confidentiality** must be maintained,
  - ▶ data about individual persons and households are not revealed
- ▶ **More detailed data are provided for higher levels of geography (Why?)**
- ▶ **Many, but not all, items are available at multiple summary levels**

# Potential Problems

---

- ▶ **The same geographic name**
  - ▶ is used for summary levels corresponding to **different aggregations**
- ▶ **Geographic areas at lower levels**
  - ▶ may be **subdivided by higher levels of geographic units**
  - ▶ E.g., a census tract may be split by town boundaries
- ▶ **The same variable names**
  - ▶ are used for different variables in the STF/SF 1 and STF/SF 3
  - ▶ E.g., in SF1 P0020001 = FAMILIES but in SF3: P0020001 = 100-PERCENT COUNT OF PERSONS
  - ▶ The way variable values are encoded makes identifying the meaning of variables difficult
- ▶ **ZIP codes do not overlay other units cleanly**
- ▶ **Geographic boundaries**
  - ▶ change with time, making time-series analysis difficult.

# Obtaining Census Geographic Boundary Files for Use in a GIS

- ▶ ArcView shapefiles and ArcInfo coverage formats are readily available for 1990 and 2000 Census geography boundaries
  - ▶ Boundary files from the U.S. Census Bureau
  - ▶ Census TIGER 2000 Linefiles from ESRI's Geography Network

The screenshot shows the U.S. Census Bureau's Cartographic Boundary Files web page. The header includes the U.S. Census Bureau logo and navigation links: What's New, Map Products, Boundary Files, On-Line Mapping, Related Sites, Contact, Site Map, Cartographic Products, and Geography. The main heading is "Cartographic Boundary Files". On the left, there is a sidebar with links: Download Boundary Files, Descriptions and Metadata, Technical Information, Boundary Files, and Site News. The main content area welcomes users to the site and explains that the boundary files are selected "generalized extracts" from the Census Bureau's TIGER geographic database, designed for use in GIS or similar mapping systems. It notes that these are not map images and have been developed for various internal projects. Below this, it lists "Cartographic Boundary File Formats" available: ARC/INFO EXPORT (.e00) format, ArcView Shapefile (.shp) format, and ARC/INFO Ungenerate (ASCII) format. A prompt asks users to "Select a link at the upper left of the page to continue...". At the bottom, source information is provided: "Source: U.S. Census Bureau, Geography Division, Cartographic Products Management Branch, Created: July 18, 2001, Last Revised: August 24, 2005 at 10:41:50 AM". The footer includes the U.S. Census Bureau logo, the tagline "Helping You Make Informed Decisions", and links for Privacy Policy, 2010 Census, Data Tools, and Information.

# More Information About the 2000 Census

---

- ▶ **Commercial firms often repackage US census data**
  - ▶ **ESRI sample data** (and online geography network) contain common census variables
  - ▶ **Rotch Library has Geolytics CDs** with convenient census datasets including 1970-2000 data that has been adjusted to reflect 2000 census tract boundary files
- ▶ Data Release Dates
- ▶ Subjects Areas of Questions Asked (lists first US census in which subject areas were first included - helpful when contemplating longitudinal studies)
- ▶ **Censuses in Other Countries**
  - ▶ International Statistics Agencies

## Example:

Let's find unemployment rates for Cambridge area block groups

---

- ▶ **How should we measure unemployment rate:**
  - ▶ Census definition is: " the fraction of **adults aged 16 or over** who are in **the labor force** and are **unemployed** (during the **sample week in April 1999**)"
- ▶ **Find the relevant SF3 census 2000 variables:**
  - ▶ we use the [SF3 technical documentation \(Ch. 3\)](#)
  - ▶ to find variable P43:
    - ▶ employment status by sex, and the name of the text file that includes the raw data for this variable (ma00004.uf3)

## Example:

Let's find unemployment rates for Cambridge area block groups

---

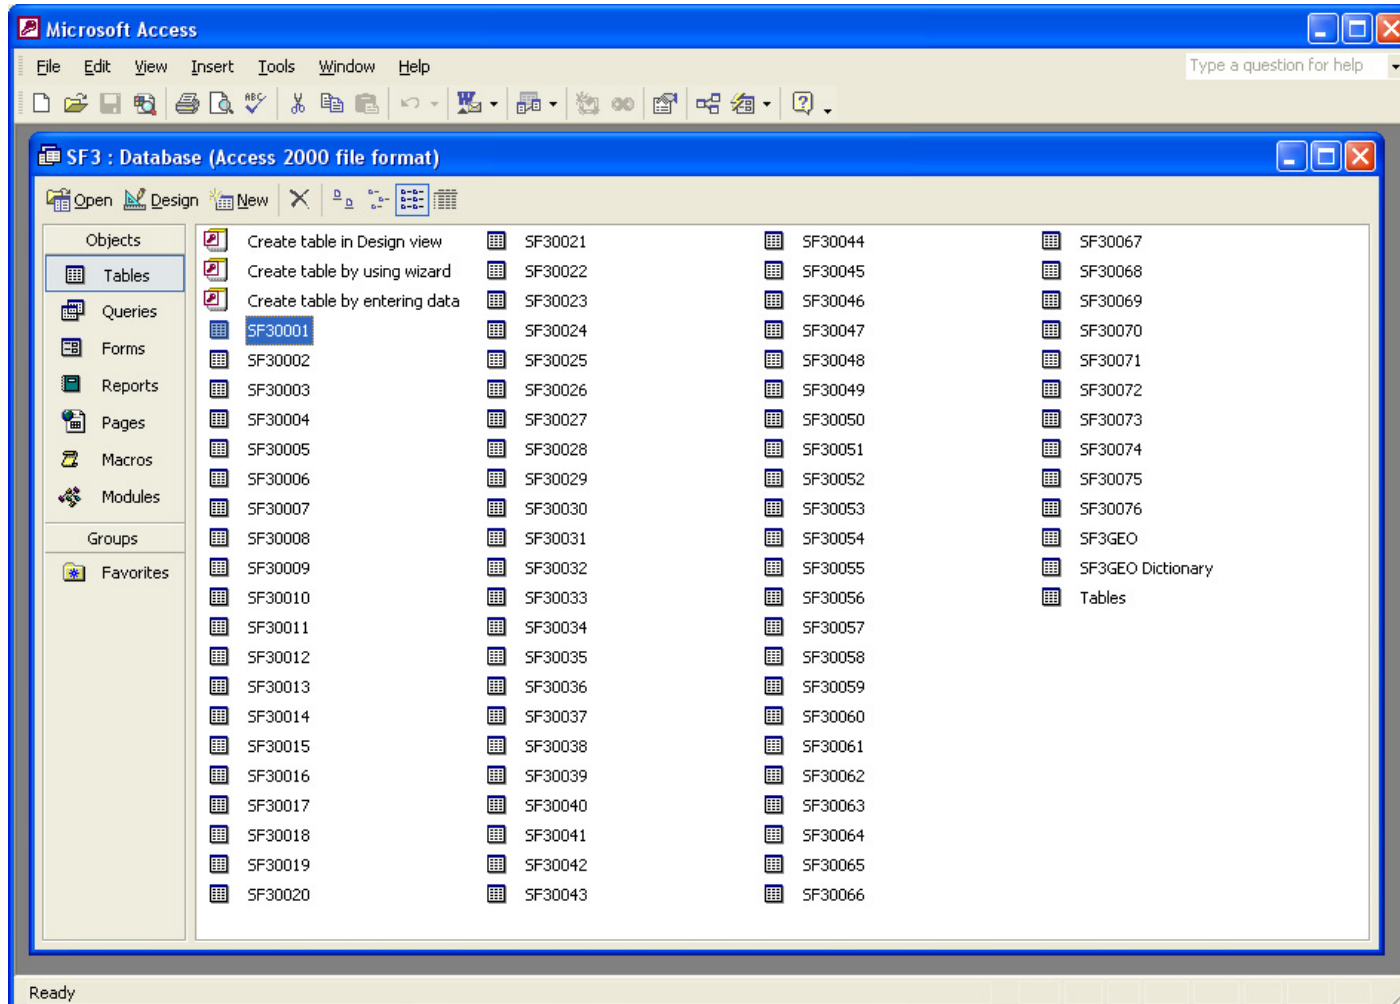

- ▶ **#### Find and download the zipped datafile** that contains P43 for Massachusetts as an ASCII 'flat file' - this file is called: ma00004.uf3
- ▶ **#### Find and download the zipped datafile** that contains the geographic identifiers for Massachusetts - this file is called: mageo.uf3
- ▶ **#### Find and download the MS-Access templates**
  - ▶ The zipped template for MS-Access 2000 is here:  
<http://www.census.gov/support/2000/SF3/Acc2000.zip>
- ▶ **#### Import the relevant Mass data into Access tables** rename the unzipped text files to end in 'txt'
- ▶ In the dialogue box that lets you tell MS-Access how to parse the text file, click 'Advanced' and choose the 'specs' that apply to the particular data file (for example, ma000043)

# Example:

Let's find unemployment rates for Cambridge area block groups

## ► Import the relevant Mass data into Access tables

# Example:

Let's find unemployment rates for Cambridge area block groups

- Import the relevant Mass data into Access tables  
(M:\data\census2k\lab5\_ma.mdb)

ID	FILEID	STUSAB	CHARITER	CFSN	LOGRECNO	P038001	P038002	P038003	P038004	P038005

# Develop MS-Access query

## to join the geography and P43 tables

---

- ▶ P43. SEX BY EMPLOYMENT STATUS FOR THE POPULATION 16 YEARS AND OVER [15]
- ▶ Universe: Population 16 years and over
- ▶ P043001: Total:
- ▶ P043002: Male:
- ▶ P043003: In labor force:
- ▶ P043004: In Armed Forces
- ▶ **P043005: Civilian:**
- ▶ P043006: Employed
- ▶ **P043007: Unemployed**
- ▶ P043008: Not in labor force
- ▶ P043009: Female:
- ▶ P043010: In labor force:
- ▶ P043011: In Armed Forces
- ▶ **P043012: Civilian:**
- ▶ P043013: Employed
- ▶ **P043014: Unemployed**
- ▶ P043015: Not in labor force
- ▶ **Join the tables using the 'logrecno' column**
- ▶ Build a **state+county+tract+blockgroup** 12-digit **block group identifier** so you can join to the block group map
- ▶ Compute the percent unemployed =  $100 * (P043007 + P0430014) / (P043005 + P043012)$

# Develop MS-Access query

## to join the geography and P43 tables

The screenshot shows the Microsoft Access Query Design view for a query named 'Ma00004\_Q'. The design grid shows a join between two tables: 'Ma00004' and 'Mageo'. The 'Ma00004' table has fields: ID (primary key), FILEID, STUSAB, CHARITER, CIFS, LOGRECNO, P038001, P038002, and P038003. The 'Mageo' table has fields: FILEID, STUSAB, SUMLEV, GEOCOMP, CHARITER, CIFS, LOGRECNO, REGION, DIVISION, and STATECE. A line connects the 'ID' field of 'Ma00004' to the 'FILEID' field of 'Mageo'. The bottom pane shows the SQL view of the query, which is a SELECT statement with a join between 'Ma00004' and 'Mageo'.

**Ma00004 Table Fields:**

- ID (Primary Key)
- FILEID
- STUSAB
- CHARITER
- CIFS
- LOGRECNO
- P038001
- P038002
- P038003

**Mageo Table Fields:**

- FILEID
- STUSAB
- SUMLEV
- GEOCOMP
- CHARITER
- CIFS
- LOGRECNO
- REGION
- DIVISION
- STATECE

**Query Design Grid:**

Field:	Table:	Sort:	Show:	Criteria:	or:
BLK_ID: [Mageo].[STATE] + [Mageo].[COUNTY] + [Mageo].[TRACT] + [Mageo].[BLKGRP]			<input checked="" type="checkbox"/>		
UnEmpRate: 100 * ([Ma00004].[P043007] + [Ma00004].[P043014]) / ([Ma00004].[P043005] + [Ma00004].[P043012])			<input checked="" type="checkbox"/>		
			<input type="checkbox"/>		
			<input type="checkbox"/>		
			<input type="checkbox"/>		
			<input type="checkbox"/>		
			<input type="checkbox"/>		
			<input type="checkbox"/>		
			<input type="checkbox"/>		
			<input type="checkbox"/>		
			<input type="checkbox"/>		

**SQL View:**

```

SELECT
    SUMLEV,
    Mageo
FROM
    Ma00004
    INNER JOIN Mageo ON Ma00004.ID = Mageo.FILEID
    
```

# Develop MS-Access query

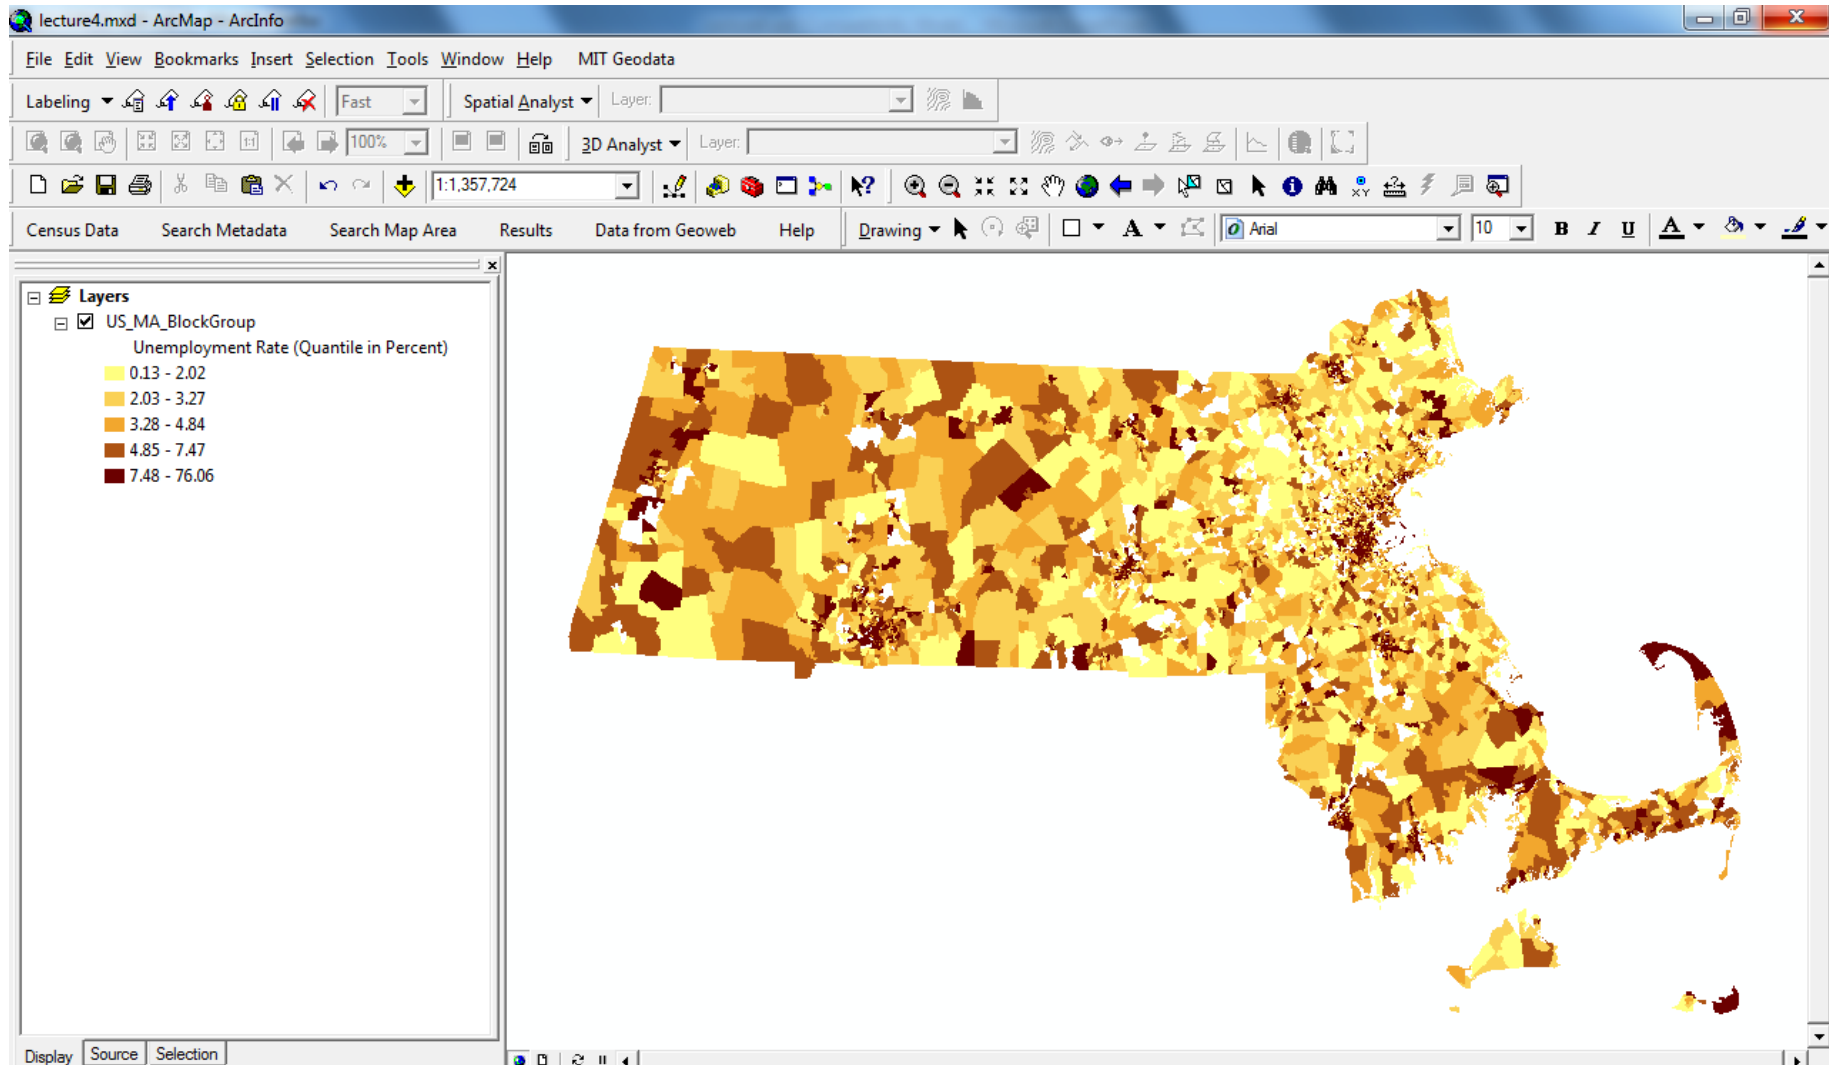

## to join the geography and P43 tables

## Final Notes:

---

- ▶ US Census provides many online tools to obtain census data.
- ▶ There are many third-party tools and CDs that repackage the data in smaller chunks, with or without maps, and sometimes in pre-processed forms
  - ▶ e.g., after normalizing to percent owner-occupied rather than just as the raw counts.
  - ▶ These assorted tools fill many niche markets.
- ▶ Relatively few census data users understand the data structure and raw files at the level described in these lecture notes
  - ▶ i.e., at the level needed to find and use any of the thousands of columns of data that are available at each level of geography.
